

Final Paper Coding

Group four

July 2021

Objectives

1. Conduct EDA (you can use the techniques in the slides; you are also encouraged to be creative and use other techniques).
2. Fit ARMA models. Pre-specify the orders. Try different order combinations and see which one provides the best fitting.

Description of the responses

In order to address our topic and research, we selected four responses: anxiety, depression, fear, and self-efficacy. With the standard scores

0.586395233 0.564051639 0.087884806 0.27060576 0.328202582 0.280039722 0.109731877 0.09632572
0.632075472 0.03326713 0.01142006

Diagnose for linear regression of anxiety

```
par(mfrow=c(1,2))
plot(lianx)
```

#####

equal variance for linear regression of anxiety

```
summary(lm1)$r.squared
```

```
## [1] 0.08522988
```

The R^2 (equals to r^2) here is 0.0852, which is far from 1, and the line is flat (which supposed to be linearly increasing to be a good fit), so this model is not a good fit. A better model is needed for fitting.

ORDINAL LOGISTIC REGRESSION

Since the anxiety is a group of ordered variables ranging no anxiety, mild anxiety, moderate anxiety to severe anxiety, so we choose to use ordinal logistic regression.

###

equal variance for linear regression of depression

```
summary(lidep)$r.squared
```

```
## [1] 0.08960916
```

The R^2 (equals to r^2) here is 0.0896, which is far from 1, and the line is flat (which supposed to be linearly increasing to be a good fit), so this model is not a good fit. A better model is needed for fitting.

ORDINAL LOGISTIC REGRESSION

Since the depression is a group of ordered variables ranging from no depression, mild depression, moderate depression to severe depression, so we choose to use ordinal logistic regression.

Diagnose for linear regression of fear

```
par(mfrow=c(1,2))
plot(lifear)
```

###

equal variance for linear regression of fear

```
summary(lifear)$r.squared
```

```
## [1] 0.1242642
```

The R^2 (equals to r^2) here is 0.1242, which is far from 1, and the line is flat (which supposed to be linearly increasing to be a good fit), so this model is not a good fit. A better model is needed for fitting.
